 Pub date: 1/16, Format: SC

This handbook on ecology and paleoecology is infused with insights on the origins and development of Mexico's Sea of Cortés during a span of more than 12 million years. It makes the connection between a beautiful shell washed onto a beach with the discovery of the same or a similar fossil shell from a nearby limestone cliff. The concept of natural history appears less often in increasingly specialized literature, nowadays, failing to draw a connection between the present and the distant past. This book makes the connection and brings the past alive. It deals with multiple and interlocking ecosystems and their fossil counterparts, providing a holistic overview on geography, ecology, and geology. Students, scholars, and outdoor enthusiasts of all kinds will find this guide an indispensable resource for exploration of virtually any stretch of coastline on the Gulf of California.

Inspired by a profound experience swimming with wild dolphins off the coast of Maui, Susan Casey set out on a quest to learn everything she could about these creatures. Her journey takes her from a community in Hawaii known as "Dolphinville," where the animals are seen as the key to spiritual enlightenment, to the dark side of the human-cetacean relationship at marine parks and dolphin-hunting grounds in Japan and the Solomon Islands, to the island of Crete, where the Minoan civilization lived in harmony with dolphins, providing a millennia-old example of a more enlightened coexistence with the natural world. Along the way, Casey recounts the history of dolphin research and introduces us to the leading marine scientists and activists who have made it their life's work to increase humans' understanding and appreciation of the wonder of dolphins--the other intelligent life on the planet.
